

## Special seal mechanism ensures leak of operating oil is zero for connecting and disconnecting

### 35 MPa Non-leak coupler socket

model **WVP-2HSH**

### 35 MPa Non-leak coupler plug

model **WVP-2HPH**

Spill amount (liquid drip amount per connection or disconnection) 0.01 mL or less

### Specifications

- Special seal installed on the tip of coupler socket and coupler plug can minimize the intrusion of air and spill of working fluid during connection and disconnection, furthermore, it prevents corruption of coolant by being miscible with spilled working fluid and air contamination of clamp circuit.
- Model WVP-2H incorporates filter and protects internal check valves and clamps from foreign substances.
- Connection and disconnection, which had been difficult to perform with conventional couplers while hydraulic pressure is applied, can be performed smoothly.
- Pressure in the circuit is retained for a long time after disconnection of coupler.
